

1. Answer the following True/False questions. (1 pt each)

a.	A CDF plot can be used to visualize the entire spectrum of a set of numerical measurements.	TRUE	FALSE
b.	It is possible for the median to be less than zero.	TRUE	FALSE
c.	It is possible for the average to be less than zero.	TRUE	FALSE
d.	Suppose that the lowest score on a quiz was a 10 and the highest score was a 20. The median quiz score will be 15.	TRUE	FALSE
e.	The median is more affected by outliers than the average.	TRUE	FALSE
f.	The 50 th percentile and the median value are always the same value in a dataset.	TRUE	FALSE

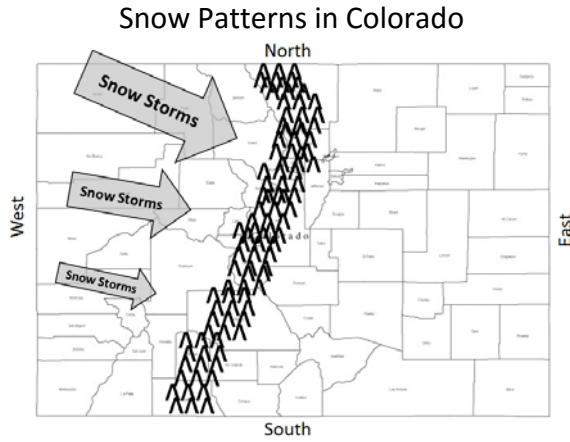

Your friend has collected a sufficiently large random sample of data from residents in three different states to investigate possible disparities in income.

2. Answer the following True/ False questions regarding this CDF plots made by your friend. (2 pts each)

a.	The median income levels for State B and C are about the same.	TRUE	FALSE
b.	State C is likely to have the most amount of disparity, i.e. spread, in income levels because its line is not as steep as the others.	TRUE	FALSE
c.	Consider only those people on the lower end of the income spectrum; State C appears to have the most amount of income disparity for this population of people.	TRUE	FALSE
d.	State A appears to have some outliers on the upper end.	TRUE	FALSE

Consider the snowfall amounts from various weather stations across Colorado. For this quiz, you should assume that snow storms in Colorado come from the North and West directions. Also, the mountains (shown as pyramids) are known to stop much of the snow resulting in large quantities of snow on the western side of these mountains. The dots in the following pictures represent weather stations in which snowfall amounts were collected.

3. Answer the following True and False questions. (2 pts each)

a. Picture B is likely to produce the largest average snowfall amount.	TRUE	FALSE
b. Picture B and C are likely to have very similar averages.	TRUE	FALSE
c. Picture A will have the largest average because it has six stations instead of five.	TRUE	FALSE
